

Elixir for Pig Farming

Elixir for Pig Farming is an innovative product produced in Georgia using European technology, which is used to decontaminate drinking water for pigs, thereby improving the microflora in the animal body.

Laboratory studies show that the product kills E.coli, Salmonella, Enterococcus and other common, harmful microorganisms. This is of great importance in the swine industry as, for example, the main source of Salmonellosis and similar diseases is very often pigs (acting as carriers).
